Art Unit: 3748

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by US 4117344 (Boerstler et al).

Boerstler et al discloses a vapor generator 10, a control means 54 for controlling the amount of liquid supplied to the evaporator through pump 12 and motor 14, 16, a speed control 42 is used to control the expander speed to come up with the desired temperature for the evaporator.

Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by US 4593527 (Nakamoto et al).

Nakamoto et al discloses a vapor generator 2, a control means 12 for controlling the amount of liquid supplied to the evaporator through motor 5, a speed control is used to control the expander speed through valve 13 to come up with the desired temperature for the evaporator.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

⁽a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Application/Control Number: 10/521,960

Art Unit: 3748

Page 3

Claim 1 is rejected under 35 U.S.C. § 103(a) as being unpatentable over JP 2001-271609 in view of JP 2000-345835. JP 2001-271609 discloses a steam generator with liquid phase input control and expander speed control. JP 2001-271609 does not disclose the temperature control. JP 2000-345835 is relied upon to disclose the concept of controlling the speed of an expander to control the temperature. It would have been obvious at the time the invention was made to a person having ordinary skill in the art to control the liquid phase input and the expander speed in JP 2001-271609 as taught by JP 2000-345825 for the purpose of achieving appropriate temperature.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Molivadas discloses power plant comprising controller for controlling the liquid intake of a steam generator.

Art Unit: 3748

Any inquiry concerning this communication or earlier communications from the Examiner should be directed to Examiner Nguyen whose telephone number is (571) 272-4861. The examiner can normally be reached on Tuesday--Friday from 12:30 AM to 10:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Thomas E. Denion can be reached on 571-272-4859. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
